

A Hayward Pool Vac Ultra suction cleaner is shown against a dark blue background. The device is white and blue, with a long, flexible white hose extending upwards. The main body is white with a blue stripe and has the Hayward logo on the front. The bottom has two white rollers and a central suction opening. The background is a dark blue gradient with a subtle pattern of light blue lines.

HAYWARD

POOL VAC ULTRA

One of the world's best selling pool cleaners

Hayward's Pool Vac Ultra is suction cleaner, so it's simple to install. It plugs into the skimmer and uses the pool's suction to vacuum the pool. And as it moves it helps chemicals to mix thereby reducing costs. But the similarities with most other suction cleaners end there. While others generate forward motion by constantly shutting the suction On and OFF. Pool Vac uses the uninterrupted flow to drive it's own internal turbine. That places far less stress on the pool's filtration system and makes Pool Vac much more reliable.

Pool Vac's turbo-drive allows it to 'walk' over the dirt and debris that others try to push through using their hose for direction. Pool Vac's independent steering and unique SmartDrive system combine to ensure it's happy with any pool shape. They also allow Pool Vac to systematically clean every inch of pool floor and easily deal with small obstacles. So, in every way, Pool Vac is perfect for concrete and fibreglass pools.

HAYWARD POOL-VAC ULTRA IS SO CLEVER, IT WALKS IN WATER!

Why do Hayward outsell most other automatic pool cleaning systems worldwide? Simple.

Hayward cleaners are very, very smart. Other 'automatic' pool cleaners crawl forward until they blunder into a corner, swim-out, step or obstacle. And there they sit. If they could change direction they'd be free. Instead they just continue endlessly cleaning the one spot, wasting time, wasting energy until someone releases them.

Hayward cleaners, on the other hand, are self-steering, and therefore truly automatic. They don't just move relentless forward. They are programmed to move in a series of circular patterns and, at timed intervals, they change direction moving off to clean the section of the pool.

The system cleans the whole pool brilliantly. It also means they cope easily with obstacles. They just run through their program until it's time to change direction, then turn away from the obstacle and move off to clean the next area. It's so smart, Hayward call it **SmartDrive**. And it's standard on all Hayward suction cleaners.
